---

Savant Systems expands the capabilities of its SmartView Tiling technology-- now handling nine (up from six) HD content or media windows on a single display.

Ideal for both residential and commercial applications, SmartView Tiling accepts 1080p video inputs (from up to x24 sources, including Blu-ray players, cable STBs, security cameras and other video devices) and delivers video via HDMI.

Users can arrange tiling, change content programming and save configuration preferences via TrueControl iPad app, all with familiar touch-based gestures such as drag and drop tile selection or pinch to zoom commands.

The 9-tile version is available now with the VOM-SV02 multi-window processing module and the SVT-009 platform.
