Aquavision launches the HD LED 19 and FHD LED 26-- surface mounted waterproof TVs installers can easily retrofit in existing rooms, including (obviously!) bathrooms.

With curved aluminium construction, optically clear glass and water resistant seals, both models meet IP65 standards and feature RS232 connectivity, x2 HDMI ports, Scart input and IR codes.

Through heating the screens do not mist up in showers, bathrooms or wet rooms.

The TVs are available in in 3 finishes-- black, white or "MirrorVision," with the glass display becoming reflective when swiched off.

The package includes waterproof remote control, while speakers and Vesa brackets come as an option.
