The recently launched Sanus Basic Series BFV846 TV/AV Stand is actually 3 pieces in one-- a solid piece of furniture, a tilting TV wall mount and an ultra-sturdy steel pillar.

Combined, the 3 pieces allow customers to enjoy the benefits of wall-mounted TV without drilling. One can also use each piece separately to create custom home theatre setups.

The stand fits TVs up to 52-inch in size, while the open design maximises airflow to equipment and provides easy access to component backs. A cable management system organises and keeps cables hidden.

Construction is in thick tempered glass and powder coated steel, with adjustable feet ensuring furniture is stable on any surface. Assembly should be quick and easy, with the package including all necessary hardware.

The stand is also compatible with the Sanus ELM701 anti-tip strap.
