At InfoComm, Screen Innovations (SI) added two new reference quality screen material options to its Zero Edge line of projection screens. Pure White is a 1.3 gain screen, while Pure Gray is a .8 gain screen.

Both feature SI's Zero Edge bezel and use a proprietary "Micro Texture."

Pure Zero Edge screens do not require any additional assembly once unpacked. Mounting options include on-wall or flown from the ceiling by slender cables. New optional LED lighting is built in to the frame and now incorporates six custom preferences and 256,000 colors, including 6500 Kelvin white.

Available in large-format projection screen sizes up to 120" in 16:9 and up to 150" in 2.35:1, the Zero Edge line now includes **Pure White** 1.3 gain, **Pure Gray** .85 gain as well as Black Diamond 2.7 gain, Black Diamond 1.4 gain or Black Diamond .8 gain screen materials.
