Middle Atlantic claims installers can save up to 30 minutes in rack assembly time with the Quick Assembly Rack (QAR) series, an affordable addition to the entry-level Essex rack lineup.

The QAR series is a knock-down rack with an innovative patent-pending snap-together design one can assemble in 5 minutes or less. It provides a foundation for residential AV systems and usable as either a skeleton rack or configured with sides, doors and a range of Essex power and accessory options.

It is available in 12 sizes complementary to residential AV systems, and is designed for installation in closets, basements and equipment rooms. Generous bottom cable entry facilities allow efficient management, and further features include lockable casters, optional leveling feet for fixed installation, mounting brackets for vertical power distribution and thermal management via passive ventilation in the rack top.

Middle Atlantic also provides a choice of 3 Essex Accessory Bundles for installers wanting to select essential accessories with one part number. Other optional accessories include solid and plexi doors, locking side panels and quiet fan tops for up to 267 CFM when forced airflow is required.
