

TV mirror maker Séura launches the first product in its new Design Series-- the Geo Design Collection, a family of HDTVs embedded within lighted mirrors featuring custom geometric shapes and patterns.

The Geo Design Collection features 10 designs, with names including Topaz, Agate and Quartz. All are available in standard and custom mirror shapes and sizes, bevel choices, lighted technologies, TV sizes and locations, with designs etched on the back of the glass using a unique "Clean-Last Etching" technique.

According to the company etching on the back keeps the glass free of debris and easier to clean, while the use of Computer Numeric Control (CNC) technology ensures etchings match the intended designs perfectly.

“We hope our customers are inspired by our design collections and take advantage of our remarkable etching capabilities,” Séura says. “The Geo Design Collection offers the opportunity to differentiate a space and provide a setting with a unique and unforgettable experience.”
