B-Tech launches the BT8225-- an "ultra slim" flat screen wall mount with twin cantilever arms suitable for displays measuring up to 75-inch and weighing 45kg, designed for both commercial and residential installations.

Ideal for the mounting of medium to large displays, the BT8225 features a tilting interface and 3 swivel points allowing quick and easy repositioning of screens. Thus customers can fold screens flat to the wall at a depth of just 40mm or leave the mount at maximum extension.

Cover plates to hide fixing and integrated cable management make for a "neat and tidy" mounting solution.
