

Hisense Presents Affordable 75-inch 4K TV

Written by Marco Attard
11. 05. 2016

Hisense announces the 75M7900-- an HDR-compatible flat panel 75-inch 4K TV the company claims is the best for watching the Euro 2016 championship (what with the company being official CE partner of the event).

Inside the metal finished frame the 75M7900 carries a quad-core processor and the HiSense Smart TV platform, providing access to connected services such as BBC iPlayer, Amazon Player and 4K Netflix. A built-in web browser provides internet duties, while Anyview Cast and Anyview Stream allow users to share content from mobile devices or PCs.

Connectivity comes through wifi, x4 HDMI ports-- although only 2 are HDCP 2.2 compliant-- x3 USB ports, x1 digital optical audio output and x1 headphone output.
