SVS announced the SoundPath pivoting wall and ceiling bracket-- with a flexible ball and clamp design allowing for the desired adjustment of speaker direction.

According to the company, the bracket rotates by 360 degrees, pans by 180 degrees and tilts beyond 30 degrees, ensuring speakers fire directly at the listening area for the best audio experience possible.

The bracket features a wide variety of mounting hardware and works with nearly every brand or model of speaker weighing up to 3.5kg. Hardware and component construction is in aluminium and high density ABS for secure, long-term use.
