The Sanus Black Series consists of a selection of five purpose-designed TV mounts designed for high-end residential businesses and installers, all supporting TVs ranging from 37 to 100-inch.

The range includes large and X-large full motion, tilting and fixed position models, as well as supporting accessories. An Enhanced Hardware Package ensures compatibility with all major TV brands, while quick release tabs allow installers to instantly unlock the TV from the wall plate. A ProSet adjustment feature allows one to adjust the TV after installation and hide small peripheral devices within a smart components panel.

The fixed mounts also incorporate ClickStand technology to hold the bottom of the TV away from the wall for easy cable access without need to remove the set from the mount. The mount features a low profile design sitting just 4cm from the wall for a neat install.

The Black Series is available from mid-November.
