ISE 2017 sees the debut of the Middle Atlantic Proximity Series Mounting Plate-- a universal display solution integrated with most of the standard-profile mounts in the VDM series.

The Proximity mounting plate can be used with existing mounts, without need for customers to upgrade the entire mount, and offer convenient mounting for small, local devices behind the display via patented UMS pattern.

The VDM series includes 17 mounts in a range of sizes and in fixed, tilt, motion, standard-profile and low-profile options, accommodating VESA patterns up to 800mm. The series comes standard with safety features keeping the display securely attached to the mount during and after installation, and all hardware required to ensure professional installation.

The motion mounts feature up to 24 inches of reach, tilt adjustment, wall plate cover and built-in cable management, while an integrated kickstand provides accessibility for servicing low-profile models.
