Following the announcement of the Playbase is the Sanus WSTV1-- a swiveling TV base recreating the look and feel of a mounted TV designed for use with the Sonos TV speaker.

The WSTV1 fits a Sonos Playbase or Playbare beneath the TV, with up to 8 inches of TV height adjustability. It works on all surfaces and promises a substantial improvement over the stands traditionally supplied with TVs. It provides 40 degrees of left-to-right swivel, fits TVs ranging from 32- to 60-inch in size and includes cable management.

Assembly is an easy 20-minute, 3-step process using only a screwdriver, and Sanus says the base is safety tested, UL certified and includes a 10-year warranty.

The WSTV1 swiveling TV base is available now.
