German TV maker Loewe announces the bild 5-- a TV featuring OLED technology together with HDR and Dolby Vision support, all inside an angular frame in either silver oak or high-gloss piano black.

Designed by Loewe creative designer Bodo Sperlein, the bild 5 is just 4mm deep and, since it features an OLED panel, needs no backlighting. On the audio side a built-in 5.1 multi-channel decoder and digital audio link allow users to add more speakers and a subwoofer.

Control comes through included TV remote. Users can also play music on the TV through their smartphone and Bluetooth connectivity.

The bild 5 is available now in 55- and 65-inch sizes.
