iRoom announces a pair of new on-wall surface-mount products-- the surDock and surDock mini, non-removable stations designed for use with the iPad and iPad mini respectively.

The surDock permanently charges the iPad through the included power supply, ensuring it is always ready for use as a home automation control system or as a wireless music streamer for an audio system. It fits all current iPad models, except the 12.9-inch iPad Pro.

Construction is in aluminium and glass, and iRoom promises installation takes all of 10 minutes on either solid or open cavity walls using a single-gang wall box, in either horizontal or vertical orientation.

The surDock and surDock mini are available now in white or black finishes.
