B-Tech AV Mounts announces a heavyweight version of the BT8310 pop-out mount-- the BT8310XL, capable of mounting super-sized displays weighing up to 125kg and up to 120-inch in size, in both landscape and portrait orientation.

Using B-Tech pop-out technology, the wall mount is designed for recess mounting of extra-large displays. The company says it is ideal for both commercial and residential applications, with the pop-out feature allowing installers to access the rear or side of the display. An additional locking kit accessory prevents unauthorised access.

"Our BT8310 has been one of our best-sellers over the past few years, and is widely used all around the globe for video walls and single screen applications," B-Tech says. "This 'beefed up' version will handle the largest of displays and makes recessed mounting of large screens a hassle-free process-- ideal for a wide range of markets from retail to residential."

The BT8310XL is available now.
