

Middle Atlantic Presents C3 Series Credenza

Written by Alice Marshall
09. 04. 2019

Middle Atlantic announces the C3 Series Credenza-- a solution combining a 10-inch-deep space-saving profile with the Frame to Furniture design approach allowing field-mount flexibility for traditional rackmounts and small devices.

First seen back at CEDIA 2018 and ISE 2019, the C3 series Credenza has a flexible, configurable rack frame making a solid foundation customer can scale as they add or replace AV components, all without sacrificing system reliability. The frame allows installer to set up a wide variety of localised AV equipment, including the increasing number of small devices used in both residential and commercial applications.

Vertical notches in each bay offer the benefit of near endless storage and rackmount configurations. Static or slide-out rackmount Tech Kits include a thermostatically controlled fan (mounts seamlessly in the base of the unit) and a 7-outlet, surge-protected power strip. The patented Lever Lock tool-free mounting system makes small device mounting and cable management easy.

Customers can choose from a selection of styles and finishes drawing on the most popular design trends-- including sleek metallic finishes-- for a completely customised furniture solution. The wood kit is installed separately from the frame, protecting it during installation while providing installers with access and visibility.

The C3 Credenza is shipping now.
