Legrand extends the On-Q line of in-wall power products with the On-Q Flat Screen TV Pro Power and Cable Management Kits, in-wall kits complete with power input module with a drywall bracket and a 1.8m power cord.

Offered in white to blend in with home decor, the module features a decorator inlet strap to provide the flexibility of ganging other connection. The power output module includes a 1.8m UL-rated power cable. A tamper-resistant outlet with a recessed design accommodates almost any type of power plug, including right angles and wall warts, while a bush strap opening allows the connection of AV cables.

Available kits include the HT22U2-WH-R6 with a white output module and the HT22U2-BK-R6 with a black output module to blend with TV mounts and hide cable connections. The HT22U2-WH-R6C features a white output module and includes two 3m in-wall-rated premium HDMI cables. The HDMI 2.0b-certified cables support UHD 4K, HDR, Deep Color, ARC, and ethernet.

The On-Q Flat Screen TV Pro Power and Cable Management Kits are available now.
