Chief launches its Thinstall ultra-thin swing arm mount and accessory family at CEDIA Expo 2011.

Thinstall mounts come in a sleek design ideal for LED, LCD and plasma TVs-- collapsing to either 33mm or 38mm with smooth Centris fingertip tilting, all in forged steel and aluminium.

Centerless lateral shift provides up to 406mm of post-install lateral shift, and installers can make height and levelling adjustments of up to 25mm following installation.

Chief provides all necessary hardware for mounting on wood, concrete or brick walls (screws, spacers and hex keys) as well as multiple cable paths (enclosed with covers).

The wide-open wall plate allows quick mount placement and power connection, and Chief says a single person can mount the system's top rail before sliding on the entire assembly.
