

Touching Plasmas with a Pen at IFA

Written by Marco Attard

LG displays its PentouchTV plasma series at IFA 2011-- bringing stylus-based touch controls to big screen TVs.

However one needs to connect their display to a Windows PC to take advantage of touch-based features using the included pen-- allowing PC file access and editing.

PenTouchTVs also carry drawing (for budding artists to draw directly on the screen), calendar and gallery software.

A 4-legged stand makes sure the TV remains stable when customers make use of Pentouch features.

The PentouchTV series handles simultaneous 2-pen use and is available in 50" (50PV490) and 60" (60PV490) models, as well as a 60" (60PZ850) 3DTV model (includes a pair of active shutter glasses).
