

The HDBaseT Alliance InfoComm 2012 stand hosts the an interesting concept projector from projectiondesign-- a version of the F35 projector with an integrated HDBaseT interface.

As a dedicated data, video, power and communications interface, HDBaseT supports up to 10.2Gbps (4K2K resolution) video, audio, control and up to 100W of remote power over 100m of standard CAT5e/6 cabling.

"We believe that HDBaseT will significantly impact the AV integrators' complex installation requirements in a positive way – reducing costs, cabling and infrastructure requirements, and work load," projectiondesign says. As an early HDBaseT adopter, projectiondesign joins AMX, Extron, Crestron, Samsung, Sony and LG.
