Dubbed **Mystik!**, Stewart's latest screen material is actually a self-adhesive projection material designed for use in digital signage applications.

Mystik! is ideal as a storefront application, as well as for other retail and public venues when a two-piece projection solution is desired. It can also be applied to any window or glass door to transform the surface into an opaque projection screen, enabling privacy while also creating a fun home entertainment space.

The Mystik! material is available in roll form, up to 78" wide and 50' long for trimming on-site.
