TruAudio launches a line of Elite Prime Vision projection screens-- including fixed frame, fixed acoustic, fixed curve and motorized screens in standard, in-ceiling, tension, twin and floor rising.

The fixed frame projection screens feature an HD 3.5-inch flat frame and a 4K curved frame model. Both cover the gamut of home theatre applications and are available in either 16:9 or 2:35:1 aspect ratios with white, gray, acoustically transparent or rear projection surfaces.

Meanwhile the wall/ceiling electric products include tension-tabbed screens available in multiple aspect ratios and screen materials.

For in-ceiling applications TruAudio has a Plenum-rated integrated solution it claims is fully compatible with home and commercial automation systems.
