The Elite Screens Evanesce B is a DIY in-ceiling projections one can install from within the above-ceiling airspace or below thanks to removable base panels.

It conveniently disappears from view when not in use, and is integrated with Greenguard-certified MaxWhite FG (fibreglass-backed) 1.1 gain matte white material with wide diffusion uniformity.

A fast-acting tubular motor moves the screen, and control options include IR, RF, 12V trigger and ethernet.

It is available in 100, 110 and 120-inch sizes with an 8-inch top masking border.
