Shipping kicks off for the BenQ GP20 Ultra-Lite LED projector, a compact 1.5kg number able to project 40-inch images from just 1m distance with 700 ANSI lumens brightness and native WXGA (1280x800) resolution.

It features a pair of 3W speakers with built-in SRS surround sound, as well as 3D-ready projection, MHL connectivity to mirror content from compatible devices and 2GB of on-board memory (expandable to up 32GB via SD card slot).

Two USB ports allow the connection of HDDs and even wifi dongles.

Powering projection is high-efficiency 3LED illumination and DLP technology, while integrated Colorific picture quality provides crisp and long-lasting colour without need for traditional projector lamps.
