JVC promises to show at CEDIA the world's slimmest LCD TV (with built-in tuner), the Super Slim LT-42DS9BJ, but more eyes will look for the latest development in its range of True Black D-ILA projectors, the DLA-HD100 Cinema Widescreen System.

This 2.35:1 system was designed specifically for the DLA-HD100 by T&W Marketing in response to requests from the custom install market. The result is a 2.35:1 system that is easy to set up, and stunning in performance.
