Epson announces the Home Cinema 3500-- a 1080p home theatre projector using 3LCD technology to project 2500 lumens of colour brightness and 2500 lumens of white brightness with a contrast ration of 70000:1.

The compact project features a pair of built-in 10W stereo speakers, and according to Epson customers can “place the projector on a table or even on a tight shelf space.” It features 7 built-in colour modes for the optimising of images for different applications, such as well-lit living rooms, backyards or garages, and users can colour-correct for projection on surfaces other than white screens.

Connectivity comes through HDMI, component and MHL port. Also included are 30-degree H and V optical keystone correction and 10-bit colour processing.

The Home Cinema 3500 is available now.
