Vivitek launches the DX813 and DW814-- a pair of 3D-compatible projectors featuring "impressive" brightness and up to 1500:1 contrast ratio within a compact, installer-friendly form factor.

The DX813 handles XGA (1024x768) resolution, while the DW814 offers maximum resolution of up to WUXGA (1920x1200). Both promise energy efficiency and low power consumptions with long life lamps, innovative optical and cooling designs and compliance with environmental management standards.

A 6 segment (RYGCWB) colour wheel provides accurate and detailed images.

The projectors are audio-ready via internal 10W speaker. Connectivity comes through HDMI, x2 VGA (compatible with 20m VGA cables), S-Video and composite. Also included are 2X zoom and 8 preset projection modes, namely presentation, movie, bright, SRGB, game, TV, blackboard and user defined.

RJ45/RS-232c connections allow for integration and system network administration, as well as compatibility with integrated network monitoring and management solutions such as Crestron RoomView, Extron, AMX SSDP and Telnet.

The DX813 and DW814 ship from April 2015.
