Elite Prime Vision (EPV), the custom install division of screen maker Elite Screens, launches the PowerMax Sonic screen-- an acoustically transparent UHD electric/motorised projection screen.

Promising superior performance and "negligible" sound propagation loss through the use of a tight weave .9 gain fabric, the PowerMax Sonic screen is designed to complement in-wall speakers, as it allows sound to pass through with minimal attenuation.

Meanwhile the 95W/220V tubular motor features integrated control circuitry within an elegant case design.

The package includes a number of control accessories-- a wireless 5-12V projector trigger, IR and RF remote controls, an extended IR sensor and a detachable wall switch keypad.

The PowerMax Sonic is available in either 100- or 120-inch size at 16:9 aspect ratio.
