Vutec's Vision-X DYNA-CURVE features an advanced multi-aspect masking system for use with all Widescreen 2.35:1 Anamorphic Lens Projectors, masking to 16:9 and 4:3, while maintaining constant image height for movie, HDTV and Standard TV formats.

Unlike Vutec's first curved screen, which was parabolic, the new screen is a horizontal curve. Dyna-Curve is available with SilverStar, BriteWhite Opaque, PearlBrite, GreyDove and SoundScreen surfaces. Dyna-Curve with SilverStar is limited to a maximum viewing height of 59°.

Dyna-Curve delivered as a 3-piece modular unit for all screen surfaces (except SilverStar where a rigid surface is supplied fully assembled). Custom sizes are also available on request.
