Screen Innovations (SI) updates the Zero Edge Flex frame style with the addition of Maestro White and Maestro Gray acoustically transparent woven screens.

The company claims the Zero Edge design breaks the rigidity barrier with a new frame making on-site assembler easier than ever for custom installers. Zero Edge Flex easily breaks down and assembles on-site, making it cost effective to ship as well as navigate tight spaces, elevators and stairways.

Meanwhile customers can configure the Zero Edge Flex Slate ambient light rejecting screen material to sizes up to 390-inches (in 16:9), while the Maestro tops out at a 185-inch maximum.
