Vivitek launches the Qumi Q6-- a WXGA (1200x800) pocket projector with 800 ANSI lumens capable of projecting images up to 90-inch diagonal via light source rated at up to 30000 hours of use.

The Q6 features an MHL (Mobile High-Definition Link) port for users wanting to share video and audio content on the large screen from any MHL-enabled mobile device. The projector also has a USB port and embedded media player for direct display of documents, photos, videos and audio files.

Audio comes through built-in 2W speaker with multiple audio ports, while DLP Link and HDMI 1.4b support allow compatibility with 3D video.

It weighs 475g and is just 34mm thick, making it easy to carry in a briefcase or backpack. A companion mobile device (iOS/Android) app provides easy remote control.

The Qumi Q6 is available now in black, white, blue, red, orange, gray or gold.
