Elite Screens launches the second generation of Starling Series motorised projection screens--the Starling 2, an enhanced version aimed at the higher-end CE retail market.

Available with Spectra White FG material alongside a stronger, faster tubular motor, the Starling 2 features integrated up-down controls on the side end-cap. A 5-12v trigger coordinates screen retraction with the projector power cycle together with a new RS232 connection, while an extended IR "eye" sensor takes care of in-ceiling applications.

The screen is Active 3D and 4K/UHD ready, with 180° wide viewing angle with 1.1 gain. A retractable feature provides added flexibility in media room design, with enameled casing available in either black or white.
