Vivitek announces the H5098-- a professional-grade projector promising all features demanded by home cinema enthusiasts, including native 1080p resolution, 50000:1 contrast ratio and 2000 ANSI lumens brightness.

The projector uses DLP technology with BrilliantColor for accurate colour and improved illumination optics for a wide colour gamut capable of projecting over 1 billion colour shades. Also in use is a 6-segment colour wheel.

Installation flexibility is ensured through a choice of 5 different lenses covering most projection throw ratio distances, while a centre lens with horizontal and vertical lens shift and quick touch release design makes setup easier.

The Vivitek H5098 is available now.
