Draper announces the Profile+-- the biggest 1.3cm-thin bezel screen from the company, set to make an official debut at InfoComm 2017.

The Profile+ fixed screen includes a 1.3cm-thin bezel framing any Draper flexible viewing surface. It is available in sizes up to 9.1mt wide, as well as stadnard 16:9, 16:10 and CinemaScope 2:35.1 aspect ratios, providing the biggest flat panel look.

The company adds the frame is light and easy to assemble, thanks to a new sliding hook-and-loop viewing surface attachment simple. The Profile+ comes with a Zero Edge option, and can be wall-mounted or flown, with optional LEDs framing it with thousands of colour possibilities to offset the picture and provide extra flash.

The Profile+ is also available with all Draper Optically Seamless ISF-certified, 8K-ready TecVision formulations, meaning there is a Profile+ solution for any need-- from 3D to Ambient Light Rejection. It ships unassembled for simplified transportation.
