SpectraCal introduces its 3DCalibration solution, the AVFoundry VideoForge.

The 3D video-pattern generator works with the company's CalMAN software. With the generator, installers and home theater owners can test for all 3D formats, as well as specific 3D system functions through patterns like 3D Left Eye/Right Eye Gating to test stereo separation. In addition, the product offers resolution tests that range from 480i/30Hz to 1080p/60Hz, and PC resolutions up to 1600x1200/75Hz.
