BenQ announces the TK800-- a native 3840 x 2160 resolution DLP projector complete with HDR capability and an RGBW colour wheel able to achieve 92% Rec. 709 colour gamut with 3000 lumens brightness.

The TK800 is designed for consumer applications, with a number of pre-loaded templates including dedicated Football and Sports modes. The Football Mode claims to preserve natural skin tones while intensifying green grass. It also clarifies announcer commentary against the cheering crowd of an open-air stadium. Meanwhile the Sports Mode prioritises skin shades while enhancing wood tones, vivid reds and balanced greens and blues.

Powering the projection is Texas Instruments Digital Light Processing (DLP) technology. Further upgrades come in the built-in CinemaMaster Audio+2 sound system with a wider frequency range and 5W driver. It uses an aluminium driver diaphragm and resonant sound chambers for bass.

The TK800 is available now.
