---

Vutec Corporation releases the Silverstar PanoFlexx-- a flexible screen featuring what the company calls Accurate Colour Panoptics (ACP) designed to increase colorimetry, while producing the same quality and performance of the Silverstar fixed wall screen.

After 4 years of research and development, we are pleased to be able to release to the industry a Silverstar product that has a lot of versatile features, including that it is more economical to pack and ship," the company says says. "We are also pleased that the Silverstar ACP easily migrated from a rigid screen to the flexible fabric of the PanoFlexx. In our testing of this next generation screen, we took several ALR samples and held them up against the PanoFlexx, the results spoke for themselves-- true color and amazing image quality that a typical ALR screen cannot produce.”

The Silverstar PanoFlexx incorporates a new flexible material, as well as ISF certification, 8K UHD support and an extruded 3.15-foot aluminium lightweight frame available in any colour or black velvet. Available formats include include 16:9, 16:10 and 2.35:1. Silverstar PanoFlexx is custom made in sizes up to 86.50-inch x 138.50-inch x 163-inch diagonal.
