The Prime Vision ISF series from EPV Screens features reference-grade-white projection material certified by the Imaging Science Foundation (ISF) to provide reference-grade picture quality.

Designed for home theatres and other controlled-light environments, the Prime Vision ISF screens feature ChromaWhite material the company says is certified to provide “neutral color temperature, superior color contrast, and enhanced black-white dynamic range.” The matte white material has a 1.25 gain and wide 180-degree viewing angles, and is compatible with standard “long-throw,” short-throw and ultra-short-throw projectors.

The screen comes mounted on a 2.4-inch aluminium frame hand-wrapped in velveteen. EPV offers screen with a 16:9 aspect ratio in (diagonal) sizes up from 100- to 180-inch, or an ultra-wide 2.35:1 screen in 138- or 158-inch. The frame has a split design for easy transport and easy to assemble sliding wall brackets.
