CEDIA Expo 2019 is all about the Screen Assistant CPQ screen quoting system for Stewart Filmscreen, with attendees able to visit with specs or prints and leave with a consultation and quote in hand.

The Expo will also have Stewart Filmscreen feature masking systems and fabrics for a variety of screen models, from the value-driven Cima brand to the Director's Choice Slimline, VistaScope and CineCurve models. Another CEDIA showcase involves the redesigned Luxus below-ceiling screen system. Ideal for use in multipurpose rooms, the retractable screen works well with UST projectors. An integrated wifi interface links the system to Alexa and other home automation platforms. Luxus is available in Phantom HALR, Firehawk, StudioTek 100 and other 16K+ screen fabrics.

Stewart Filmscreen further plans to show Balón and the all-new Balón Edge. Both video projection screens feature impeccable fit and finish, and offer the same unlimited fabric options from Stewart Filmscreen. Balón offers a fixed-frame, borderless screen with overlapping wrap to hide all frame edges.

“The CEDIA Expo allows attendees to see first-hand the quality of our projection screen systems, each of which is customised to the customer’s unique requirements and then meticulously handcrafted by one of our professional artisans,” the company says. “We look forward to demonstrating our newly redesigned Luxus, unveiling the new Balón Edge, and showing visitors how smoothly we can tailor every aspect of screen design and fabrication to meet their specific needs.”
