Stewart Filmscreen launches the Balón Edge-- an ultra-thin frame screen with a minimalistic black border finish ideal for both residential and commercial customers demanding two-piece projection.

“The new Balón Edge is the perfect wall-mount screen for those who want a thinly framed projection screen,” the company says. “Each Balón Edge projection screen is handmade to match your specific viewing needs and made to order for your particular venue. You know you are getting the best when you choose Stewart Filmscreen, and you’ll know this as soon as you open the box.”

Like the original Balón Borderless, the Balón Edge is custom-fabricated in any size up to 4.8m image width (all seamless) in any aspect ratio. The 0.4-inch border can either be wrapped in Velux light-deadening material or kept minimalist as a bare-metal painted frame. Both Balón Borderless and Balón Edge have a 1-inch frame depth, keeping it snug to the wall.

The Balón projection screen series features the same unlimited fabric options, and flexible front
