ISE 2020 sees dnp announce the Supernova Infinity, a modular screen system able to create screen images of any size, can be made in any size with ambient light rejection (ALR) projection screen material.

Previously the ALR material was limited to 120-inch screen sizes.

The Supernova Infinity UST is a modular screen system creating screen images of any size. It provides a zero physical seam viewing experience, with multiple projectors used to create bigger images with visible overlap. The displays are made of tiled panels up to 1.5m in height, and offer seamless viewing experiences with only 0.3mm joint lines.

The display is optimised for UST projectors, and supports FHD, 4K and 8K resolutions. It is available as either a frameless solution or mounted with a 50mm black velvet frame.
