An industry first, Da-Lite launches a tabletop Pico Screen.

The new screen follows the fast-growing pico projectors market and is a lightweight portable projection system for business meetings, training, gaming and many other applications.

Setup is as easy as removing the screen from the carrying case, pulling the two halves of the case apart and placing the screen on a table or stand. There are no latches or feet to deal with. Fully expanded, the viewing area of the screen is a 30" diagonal HDTV format. Since the screen maintains a constant height and is infinitely adjustable, an NTSC video format can be easily achieved to accommodate a variety of source materials.

The Da-Lite Pico Screen is standard with Video Spectra 1.5 gain screen material. In the closed position, the screen case is only 19" long and weighs five pounds.
