Projecta introduces two concealed motorized projector lifts: the **Pro-Lift** (vertically raised lift) and the **Pro-Lift Pivot** (pivoting lift).

The Projecta projector lifts come with a universal projector mount and are constructed of heavy duty materials. Both universal lifts can be mounted in either a suspended or a drywall ceiling.

The Pro-Lift is a vertically raised lift with a heavy duty steel construction using rack and pinion or screw drives instead of chain mechanisms. The Pro-Lift is available in two versions. The Pro-Lift 25 moves 25 cm down from the ceiling and the Pro-Lift 38 moves down 38 cm. Both versions have a load capacity of 18 kg.

The Pro-Lift Pivot offers a tilting feature with a fixed pivot point to help insure proper projector alignment. The projector lift features a built-in potential free contacts and has an internally mounted control switch for installer friendly operation. The trim flange at the bottom ensures that installation in the ceiling remains inconspicuous. The Pro-Lift Pivot has a load capacity of 11 kg.
