

Acer announces two additions to its pico projectors series-- the C110 and C112, both in a diminutive form factor designed for customers to show off content from their smartphones and tablets.

The C110 is the smallest of the 2 models, and lacks a power adapter (or power source) or a display port-- it takes both images and power via USB connection. Measuring 110 x 85 x 25mm, it only weighs 175g.

It combines DLP technology with an LED lamp Acer says lasts up to 20000 hours, with 1000:1 contrast and WVGA (854 x 480) resolution images. Display size starts from 12" to 100", in native 16:9 format.

The C112, meanwhile, is slightly larger and heavier and carries specifications identical to the C110's-- while coming with an optional external battery Acer says has around 2 hours' worth of power.

Both models come in matte black, with the C112 having control buttons embedded on its top surface.
