Microvision's SHOWWX+ pico projector gets an HDMI update, while keeping the same portable size and weight.

It supports all iDevices, as well as anything that's HDMI-ready-- although not all devices will support full video mirroring. It is also HDCP compliant.

The projector's brightness is 15 lumens, with 5000:1 native contrast ratio and 2-hour battery life, according to Microvision. Resolution remains at 848 x 480.
