Wowee One announces the Wowee Vue-- a pico projector designed for use with iDevices, as well as mobile Androids.

It connects to iPhones, iPads and iPods via 30-pin connector (cable included), while an HDMI port caters for Android smartphones and tablets and composite adapter allows use with other TV-out devices.

Resolution is WVGA (848x480), with 15 lumens brightness and 16:9 aspect ratio. Wowee One says no focus adjustment is needed, as "image is always in focus, even on curved surfaces." No details are yet available in audio capabilities.

An internal battery provides up to 4 hours of power, and the projector also operates using a wall charger.
