

Euroscreen Goes to Deep Space

Written by Marco Attard
30. 01. 2012

Euroscreen launches Deep Space 3D at ISE 2012-- a new projection surface featuring a special grey coating making it ideal for both 3D and 2D projection.

It has a polarised high gain projection surface (improving passive 3D projection) and a high gain (1.4) and high contrast fabric for 2D projection. The rear side is black, making it ideal for use in front of light sources (such as ambient or spot lights).

Euroscreen supplies the Deep Space material on both electrical (with black borders and black top drop) and frame screens.

Also on display at ISE is Tiziano-- a range of tensioned and non-tensioned electrical screens featuring an exclusive design housing in different colours.
