Described by *Boat International* as "one of the world's most amazing super yachts, that could spell the future for efficient long range cruising", the striking 42.5m Trimaran

Adastra

has recently been launched for Hong Kong clients Anto and Elaine Marden.

The Adastra, a \$15M yacht, is capable of traveling from London to New York while **controlled via an app on its owner's iPad**

"Adastra" is the result of more than five years of design (and discussion with the owners) to make a viable luxury yacht from the "power trimaran" concept (previously only used by record-breakers who stripped-out trimarans for racing).

Adastra's 16 metre beam creates a spacious saloon area on the main deck which offers superb views through a panoramic window and holds a lounge area, dining table and navigation station. Adastra accommodates 9 guests and up to 6 crew members. The main helm station (seats two) is positioned in a raised pilot house situated between the aft deck and the saloon area and forms part of the cross beam structure.
