The DECT Forum, the international wireless home and enterprise communication industry association, forms the ULE Alliance, an non-profit organisation for the promotion global Ultra Low Energy (ULE) technology adoption.

ULE is a DECT-developed control network ecosystem for home and building applications demanding reliable in-house communications.

The Alliance will focus on 3 initial application segments-- home automation, security and climate Control.

“ULE is the best-of-class technology which represents the next evolution in home networking. ULE will revolutionize the connectivity between home appliances and will put control in the hand of the end user to significantly reduce the energy consumption”, ULE board member Andreas Zipp says. “We believe that ULE will bring new growth opportunities in a sizable market with many exciting applications.”

Making the Alliance founders are the DECT Forum, Dialog Semiconductor, DSP Group, Gigaset and Vtech. Further members include Aastra, AVM, Binatone, Dosch&Amand, Sri Lanka Telecom, Swissvoice, and RTX.
