Panduit, a global electrical and network infrastructure solution vendor, announces the acquisition of Atlona in a deal the two companies describe as beneficial for both sides. Financial details are not available.

"Atlona has been at the forefront in developing cutting-edge AV technology that embraces the full potential of the convergence of AV and network infrastructure," Panduit says. "Their industry-leading solutions complement Panduit's extensive physical infrastructure portfolio, which will allow us to offer customers a quality end-to-end solution as they move to increasingly complex network infrastructure systems."

"There are strong synergies between our companies including a culture of providing innovative, high-quality, customer-driven products, along with outstanding customer support capabilities," Atlona adds. "This partnership will ultimately provide our market channels with a single-source solution and expand our footprint globally."

Panduit sells physical, electrical, network infrastructure and AV solutions for enterprise environments ranging from the datacentre and telecom room to the desktop and plant floor. It has 112 global locations, with an HQ in Tinley Park, Illinois. Post-acquisition Atlona becomes part of the Panduit Enterprise business group, even as it continues to serve customers for all sales, customer support and training related inquiries.
